

***WINDING MACHINE FOR ANNEALED WIRE
BUILDING USE***

PRODUCTION CYCLE

Collecting of the wires from big spools

End wire, tangle wire, regulation of tension wire

Automatic shearing of wire

Automatic expulsion

All the operations can be effected in manual/semiautomatic/automatic

Passages of the wires to feed the winding machine with safety systems and alarms

Wrapping on double conic mandrel for model RPE and on one parallel mandrel for model RPE-V

Automatic external plasticization

All laying parameters are selected with digital keyboard Siemens

Completely automatic machine for manufacturing and outer plasticizing of skeins of annealed wire

Possibility of variation of the weight, depends on the model
